

HARVEST

AGROFER SELF- UNLOADING PICKING TRAILERS

These trailers have been designed for carrying bins of fruit or grapes and to allow easy self-unloading without the use of a forklift.

They can quickly transport bins from the orchard to yard, which keeps bins out of the orchard and removes soil contamination. Self unloading also allows for a speedy turn around.

Three lengths available for carrying three (3,640mm), four (4,810mm) or five (6,010) bins.

All trailers have an overall width of 1600mm and a load capacity of 3,000kg.

The trailer has folding footboards (200mm wide) for easier access to

the bin to empty the fruit in comfortably.

A clever 'bascule' drawbar system gives fantastic turning in and out of tight rows.

The drawbar design also enables gentle tipping of the trailer, so the bins can gently slide down the roller track to the ground without jolting the product.

Road legal with 10.0/75 15.3 tyres and wheels, min. 8 ply.

Options:

- Hydraulic trailer brakes
- Hydraulic operation of loading ramps
- Road lighting kit
