

PRUNING

FELCO POWERBLADE ELECTRIC SECATEURS

A new generation of professional Felco PowerBlade Electric Secateurs provides consistent pruning and cutting excellence.

As the world leader in pruning shears, Felco has developed their range of electric secateurs to create the Felco PowerBlade.

The secateurs feature the efficiency, power, comfort and precision that meet professional cutting requirements, while also connecting to your tablet or smartphone.

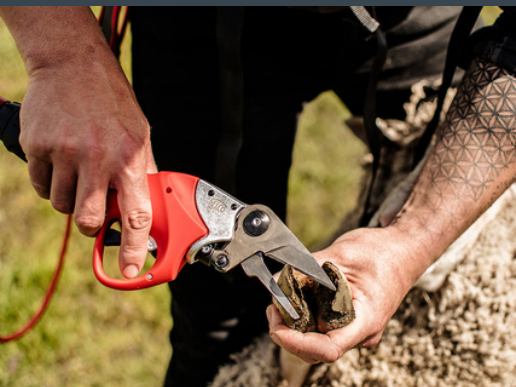

Favoured by everyone from vineyard owners, to self-employed pruners, contractors and vineyard staff, the Felco PowerBlade XPRO range is made up of three different models of electric pruning secateurs including:

- the 802 capable of cutting up to 30mm;

- the 812 for pruning up to 35mm;
- and the heavy-duty 822 designed for making large, powerful cuts of up to 45mm.

The blade, which also requires less sharpening, has been tested against competitors and came out by far the strongest option on the market.

All models come with a Power Pack. The new fully adjustable carrying system which is two times lighter and more compact than the previous carrying system. This pack can be worn in five different ways and the ventilated straps are based on the structure of the back for optimum comfort and freedom of movement.

Most pruning jobs require the standard single-capacity battery. However, depending on the hardness, diameter and quantity of those cuts, it is an option to upgrade to the double-capacity battery- ideal for users of the 822 handset.

The Li-ion battery has a LED display to indicate the charge level and takes 90 minutes (standard) or 180 minutes (double capacity) to fully recharge.

The Felco Power Blades have also been fitted with Bluetooth connectivity enabling the shears to talk to the operator's smartphone or tablet.

After installing the new Felco app, operators can adjust the semi-opening, which can be set to 50%, 60%, 70% or off, and activate holster mode.

There is also a 'dashboard' that shows warranty status and tool performance data such as the number of cuts, battery life, time of usage and cut size statistics.

All units purchased from NP Seymour come with a 2 year warranty. The unit will require servicing after 400,000 cuts (or 12 months- whichever is sooner) which will be carried out by our Felco trained technicians at NP Seymour.

We keep a large supply of all Felco spare parts so we can ensure a prompt turn around should any replacement parts be required.

FELCO POWERBLADE ELECTRIC SECATEURS SPECIFICATION:

- The new Felco XPRO blade, a superior quality hardened steel blade designed to provide longer cutting edge retention, precision and durability.
- Soft touch coating on the handset gives the best possible grip and ultimate comfort.
- Progressive trigger to cut more efficiently and quickly through larger or smaller branches and give the perfect control of blade movement.
- Semi-opening mode for faster cutting speed when used on smaller-diameter wood. Adjustable to suit your needs at 50%, 60% and 70%.
- Micrometric setting to give optimal adjustment of the cutting head.
- Brushless motor for excellent performance and easier maintenance.
- Rotary on/off switch at the base of the tool for easy access.
- Bluetooth connectivity to a downloadable Felco app to monitor performance and make adjustments.
- Compact, comfortable and adjustable carrying system.
- As standard, all kits include a 825g battery which under normal conditions lasts a full day, but additional batteries are available along with a new double capacity 1360kg battery. All batteries feature a handy LED charge indicator and provide 25% more battery life than previous models.
- Each kit comes with a battery charger, diamond sharpener and grease pump all housed in a lightweight, hard carry case.
- All handsets are compatible with the Felco 1m and 1.5m extension poles. These are made of lightweight aluminium with a soft touch grip on the handle and have a retractable hook for pulling down branches.
- There are other accessories available in the Felco range, including additional batteries, gloves, sharpening tools, holsters and maintenance products.
- There is also an optional hoof trimming blade available for the 802 handset.

Model	Cut diameter (mm)	Weight (g)	Length (mm)
802 - fast and precise	30	750	265
812 - ergonomic and versatile	35	810	280
822 - powerful and robust	45	980	295
