

FRUIT PICKING

WORKING AND PICKING PLATFORM

Our rear-mounted three-point linkage mounted working platforms have been developed to make the task of picking fruit from modern growing systems easier and safer.

We design and build these platforms at our Avon Works site to meet customers' individual specifications.

The mesh floor and whole frame are galvanised to give many years of service. Access is via an incorporated ladder that forms part of the safety barrier.

Even with the platform attached, growers can still mount a trailer or picking train onto the tractor drawbar for an even more efficient harvest.

While mainly used for picking, the platforms can be used all year round for other tasks on the farm which require workers to operate at moderate heights.
