

SPRAYER

NP SEYMOUR STRAWBERRY SPRAYER

Trailed or mounted, we can deliver an effective air assisted solution for spraying table top strawberries. Bespoke made here at Avon Works to suit grower's individual requirements.

We began designing and manufacturing these machines when a grower came to us looking for advice on improving his sprayer as his control of disease was not effective.

We determined that air assistance was needed to penetrate the plants and get a better spray cover.

However, as there was nothing on the market at the time that would spray all five rows in a tunnel with air assistance, we built a machine that straddled the centre row and was capable of being run with a 30hp tractor.

Other growers heard about this bespoke-made sprayer and wanted something which would fit within their system.

We now manufacture machines for growers all over the UK, from Kent to Scotland.

Growers can choose from 400 litre to 2000 litre tanks to fit as many rows and spacing as needed.

Our most popular model is trailed table top sprayer with 1000 or 1500 litre stainless tank and tandem axle to give boom stability.

Due to the newer varieties of strawberry, which grow berries down the sides of the tables, we also developed a drop tube with multiple air assisted nozzles to get a good cover on these berries.

The new design drop tubes introduced in 2025 feature recessed nozzles built into the tube to prevent snagging on plants. The nozzle is also positioned further away from the target for better coverage. Can be retrofitted to existing table top strawberry sprayers.

We also have flexible drop tubes for leg rows.

Our machines have as standard

an air assisted double nozzle assembly over each row and 2 under canons to create air turbulence below the tables.

NP Seymour bespoke made table top strawberry sprayer specifications:

- Stainless steel tank
- AR813 or AR804 80 litre / min pump.
- Hydraulic folding booms as standard
- Single nozzle head with two heads per table-top
- Out put of up to 1000 litres per hectare
- Galvanised chassis, frame and booms
- Drop tubes with recessed nozzles.
