

## BMV Trimmer model FL800P (2+7+1) For economical orchard management

This machine can be used for both winter and summer pruning of fruit trees to control growth and promote heavier cropping. Used in the winter with saw blades and in the summer with knives for faster cutting of the green wood.

Can also be used for cutting side windbreaks up to 4.5m high.

These machines are the future of modern orchard planting especially the new fruit wall systems, where they are used in conjunction with the Darwin Blossom Thinner.

The top cutting bar can work both vertically and horizontally and is adjustable for height.

The top bar can be equipped with a feeler bar to avoid posts.

The bottom blade can work either vertically or at any angle up to 90°.

Cutting dimensions: 780mm top blades (2), 27.m vertical blades (7), 400mm bottom blade.
