

## Ladurner weeder

The machine for complete herbicide-free weed control!

The Ladurner cultivator has two rotors with blades with an adjustable working depth of up to 10cm. Sensor bars ensure that the machine is set to the right width and works around the tree or vine stems.

The cultivator tears the grass and weeds apart including roots and spreads them evenly, so there is no ground displacement. There are protective guards to ensure the soil is not spread into the central alley.

Due to hydraulic angle adjustment it can be used on terraced vineyards and side slopes. Stony soil is not a problem and a working speed of up to 4 KPH is possible.

*"The Ladurner has transformed our organic farm, there is no other machine that would keep our orchard as clean and tidy as this without using herbicides"* - Richard Castle, DJ Moor Organics Ltd.

### Specifications:

Single or double sided

Front or rear mounting

PTO driven + 12V supply

Electric – hydraulic control

Working depth: 0 – 10 cm

Distance between trees: 1.8 – 4 metres

Working width: 40cm
