

Working Platform

3 Point linkage mounted

Designed and built by us to Customer's specification. This three point linkage mounted working platform makes the task of maintaining and picking fruit from modern fruit hedge rows easier and safer. Can be used all year round for other tasks on the farm independently of a trailed appliance.

A trailer or picking train can be mounted onto the tractor draw bar at the same time.

An optional framework for Agrofer trailers to use the link arms at the same time is available.

The mesh floor and whole frame is galvanised to give many years of service.

Access is via an incorporated ladder that forms part of the safety barrier.
