

CANOPY MANAGEMENT **ERO PROFI LINE VINE TRIMMERS**

With no central mast, the Profi Line vine trimmer provides operators with improved visibility while its comprehensive basic equipment ensures comfortable and quick working.

These trimmers are perfectly suited to larger vineyards and the twin hydraulic masts enable the operator to adjust the height, width and angle of each trimming side independently making the machine adaptable to a range of vineyard environments. The joystick, which is included as standard, makes numerous functions conveniently available to the operator and its favourable weight distribution makes driving easier in difficult terrain. Designed and built by ERO, Germany's leading manufacturer of specialist viticulture machinery, the Profi Line vine trimmer needs very little maintenance; for example, the V-belts no longer require tensioning.

Sealed knife bearing units and closed side parts ensure optimum protection for the drive. Alongside all other ERO vine trimmers, the Profi Line features a hardened stainless-steel blade which is shaped to create suction, removing debris from canopy and pulling small shoots out for the cleanest result.

The Profi Line can be installed quickly and easily by attaching the extension with automatic centring. After connecting only two hydraulic hoses and the power supply, the Profi Line is ready for use.
