

PRUNING FELCO POWER BLADE

AS THE WORLD LEADER IN PRUNING SHEARS, FELCO HAVE DEVELOPED THEIR RANGE OF ELECTRIC SECATEURS TO CREATE THE FELCO POWER BLADE. THE SECATEURS FEATURE THE EFFICIENCY, POWER, COMFORT AND PRECISION THAT MEET PROFESSIONAL CUTTING REQUIREMENTS, WHILE ALSO CONNECTING TO YOUR TABLET OR SMARTPHONE

All handsets feature:

The new Felco XPRO Blade, a superior quality hardened steel blade designed to provide longer cutting edge retention, precision and durability.

The optional hoof trimming blade for the 802 handset is also available with these features.

Soft Touch handset to provide better grip and comfort.

Progressive Trigger to cut more efficiently and quickly through larger or smaller branches. All handsets are compatible with the Felco 1m and 1.5m extension poles.

		Cut Diameter	Weight	Length
FELCO 802 Fast & Precise		30mm	750g	265mm
FELCO 812 Ergonomic & Versatile		35mm	810g	280mm
FELCO 822 Powerful & Robust		45mm	980g	295mm

Power Pack and Battery:

Fully adjustable carrying system for the power pack and battery- practical, compact and lightweight.

This pack can be worn in five different ways and the straps are based on the structure of the back for optimum comfort and freedom of movement.

Most pruning jobs require the standard single capacity battery, however depending on the hardness, diameter and quantity of those cuts, it is an option to upgrade to the double capacity battery- ideal for users of the 822 handset.

The Li-ion battery has a LED display to indicate the charge level and takes 90 minutes (standard) or 180 minutes (double capacity) to fully recharge.

Accessories:

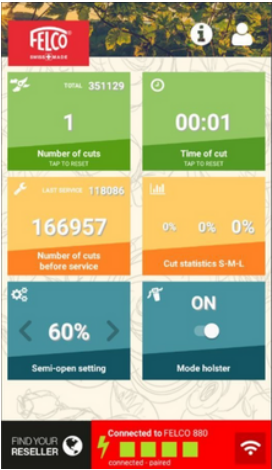

For added reach, there are two extension poles available in 1m and 1.5m lengths. These are made of lightweight aluminium with a soft touch grip on the handle and have a retractable hook for pulling down branches. These are compatible with all Felco electric secateurs and the handset simply plugs into the end of the pole, is secured with a metal clasp and then the power cord is connected. Once the power is on, just press the trigger to operate the unit and begin pruning. There are other accessories available in the Felco range including additional batteries, gloves, sharpening tools, holsters and maintenance products.

Felco App:

The Felco Power Blade can be connected via Bluetooth to the Felco app.

This simple to use app will allow the user to monitor the tool performance, warranty status and view various statistics, such as the number of cuts.

The user can also easily check the battery level as well as adjust the settings of the half- opening blade mode which can be set to 50%, 60%, 70% or Off.

Kit contents, Servicing and Warranty:

Included with every kit is the handset, power pack with holster, standard battery (can be upgraded to a double capacity battery), battery charger, diamond sharpener and grease pump all housed in a light weight, hard carry case.

All units purchased from NP Seymour come with a 3 year warranty on the handset and 2 year warranty on the power pack and battery. The unit will require servicing after 400,000 cuts (or 12 months- whichever is sooner) which will be carried out by our Felco trained technicians at NP Seymour. We keep a large supply of all Felco spare parts so we can ensure a prompt turn around should any replacement parts be required.
