

## MOWER

# PERFECT TK SERIES

### COMPACT FRONT OR REAR MOUNTED MOWER SUITABLE FOR NARROW TRACTORS

The range of compact 'TK' mowers from Perfect have a totally adjustable linkage frame meaning the mower can sit incredibly close to the rear or front of the tractor. The front mounted version has a universal gearbox that will accept either PTO rotation and the rear linkage mounted version is still suitable for spray-mowing. The blades are contra-rotating (and

over-lapping so no stripes!) which gives a better mulch of the material and this can be distributed behind the machine or out to the left and right as a mulch around your trees.

#### Standard configuration:

TKF: Front model universal gearbox for any gearbox PTO rotation with integrated free running clutch and unique head stock for close mounting to the tractor, PTO speed 540, 750 or 1000 rpm

TKR: 3-point mounted model with mow-spray combination feature, PTO speed 540 rpm.

3 point linkage (cat. I + II)  
Walterscheid PTO shaft

Indirect and flexible V-belt drive (most belts with automatic spring loaded tensioner)

4 short blades with opposite rotating direction and replaceable and reversible cutting edges.

Overlapping blade on left centre blade Low, streamlined profile and round sides

2 front support wheels and 1 rear roller with conical ends and special covers over the bearings

Indirect and flexible drive through 2 Generously overlapping cutting blades with opposite rotating directions and replaceable and reversible cutting edges.

The cut material can be distributed from the machine.

Available in 200cm and 230cm widths.
