

POWER HARROW BULLION POWER HARROW WITH SEEDER UNIT

The Bullion MekFarmer 80 power harrows can also be fitted with an APV pneumatic 120 M1 seeder unit.

This allow for soil cultivation and seeding in a single pass, which not only limits operating costs but also prevents excessive soil compaction.

The power harrows, manufactured by Breviglieri, finely break up the soil, refining and evenly distributing it over the entire working width to create a perfect seed bed. They can break up even the most compacted ground, often in a single pass and

are superb machines for repairing rutted and untidy ground or alleyways in orchards and vineyards.

These three point linkage power harrows have knife style vertical rotating blades which require less power and so consume less fuel.

All versions are fitted with a 324rpm gearbox, 260x12mm sturdy blades (for a 22-25 max working depth), sprung loaded side shields which open outwards in case of impact with stones, a sturdy rear levelling bar and a packer roller for a clean finish.

The compact 120-litre APV pneumatic seeder units benefit from an electronically controlled seeding shaft that allows for precision metering, which means less seed is required.

The seeds are then moved into the hoses and dispersion plates that distribute them uniformly and close to the ground for optimal placement. This allows for precise seeding even in windy conditions.

Model	HP	KG	Dimension (cm)	Blades
80-130	40-50	490	135	12
80-150	50-60	560	155	14
80-170	60-80	605	175	16
80-190	70-80	660	195	18
