

PULVERISER

PERFECT VARIOCHOP

**WITH THE RIGHT
MACHINERY,
MULCHING OR
SHREDDING
PRUNINGS CAN BE
QUICK, EFFECTIVE
AND IS A GREAT
WAY TO ADD
HUMUS TO THE
SOIL.**

The Variochop shredder from Perfect van Wamel can be front- or rear-mounted and gives growers the additional option to adjust the PTO speed.

By changing the position of the V-belt pulleys, operators can select between 540, 750 or 1000 rpm depending on the positioning of the pulveriser and capabilities of the tractor.

In particular, the 750 rpm option will allow operators with larger tractors to drive the machine with a reduced engine speed to limit fuel consumption and improve efficiency.

With working widths of 135, 150, 180 and 210 cm, the Variochop is suited to work in orchards and vineyards. The heavy construction, and 2.2kg flails also allow for shredding of prunings up to 8cm in diameter.

Growers who want to make year-round use of the machine can even choose to fit Perfect's Combi flails, which not only provides very good shredding of wood but also gives a very nice and even cut in grass.

The Variochop range is a follow-up to the existing BGM and BKM series.

Three-point linkage mounted cat. I + II
Universal gearbox able to accept either PTO rotation
Walterscheid PTO shaft
3 V-belt drive with automatic tensioner
Cutting height adjustable from 2- 12cm
Hydraulic offset frame as standard
Low construction max height 51 cm
Side skids
Full width rear roller with enclosed bearings
Twin Skin hood
